PlasticWatch

AI and GIS for urban waterway and waste intelligence

Citizens photograph likely plastic waste. Duplicate reports merge into hotspots, ranked by impact near drains and water — then a person, not the model, decides what happens next.

Check this photo

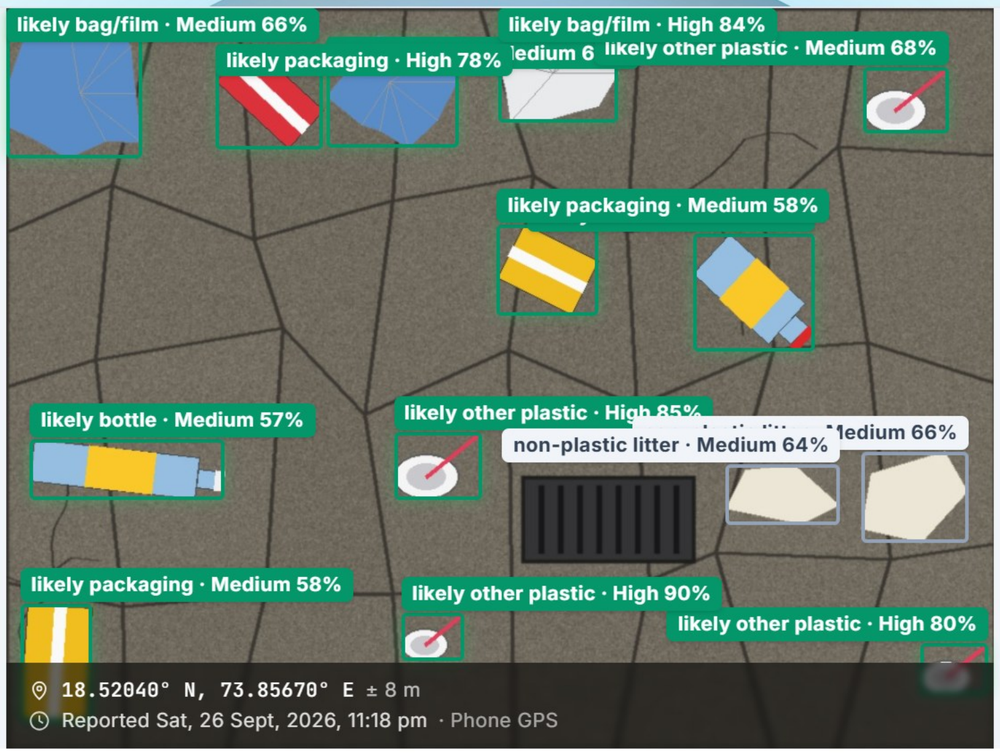
You will see what the detector found, and can still change your mind.

Check before you send

Nothing has been sent yet. This is what the detector found in your photo.



Likely plastic: 12 items

Check this looks right before you send it.

- 4 other likely plastic
- 3 likely bags or film
- 3 likely packaging
- 2 likely bottles
- 2 non-plastic litter

●●● High confidence 86%

The model only flags what *looks* like plastic, and its confidence is not a probability. Sending this does not resolve anything: an authority checks every hotspot before any cleanup is scheduled.
